Maintaining your **Meraki** Quartz Surfaces

Meraki quartz surfaces are stylish and sophisticated, with enduring beauty and strength.

Our surfaces require minimal maintenance and no sealing to retain their shine and brilliance.

Daily Care

Simply wipe the worktops with warm water and a mild, non-abrasive cleanser, and rinse with clean water.

In the case of stubborn marks, the use of a non-scratch sponge or cloth and a non-abrasive cleaner is recommended. Simply rub gently onto the mark and clean with a damp cloth.

Scratch Resistant

Meraki quartz is harder than natural stone and highly scratch resistant. However, refrain from using the ends of sharp objects, such as knives or screwdrivers, directly on the surface.

Heat Tolerance

Meraki quartz is structurally more heat resistant than many other surfaces. However, like other stone tops, excessive heat may cause thermal shock and damage. The use of a trivet or hot pad under hot pots and pans is recommended.

Cleaning Products to Avoid

Cleaners that contain Xylene, Toluene, Potassium Hydroxide or Caustic Soda. Paint removers and furniture strippers containing Trichloroethane or Methylene Chloride.

Cleaners that contain Pine Oil. Without very thorough rinsing, these products can leave a residue behind. This residue then attracts and holds dirt on the surface, eventually reducing the cleanliness of the surface and its appearance.

Abrasive scrubs or cleaners containing abrasive particles. The abrasives could harm the surface and, if not completely rinsed off, could leave a residue that dulls the appearance of the surface.

Highly aggressive cleaning agents such as oven/grill cleaners and dishwasher polishing agents with a high alkaline level (pH 8.5 or higher).
